Background

HHSC is responsible for the reimbursement determination functions for the Texas Medicaid Program. Proposed rates are calculated utilizing established methodologies that conform to the Social Security Act and related federal regulations, the federally approved Texas Medicaid State Plan, all applicable state statutes and rules, and other requirements. HHSC reviews the Medicaid reimbursement rates for all acute care services every two years. These biennial reviews result in rates that are increased, decreased, or remain the same. The reviews are conducted to ensure that rates continue to be based on established rate methodologies.

Methodology

The specific administrative rules that govern the establishment of the fees in this proposal were calculated in accordance with Title 1 of the Texas Administrative Code (TAC):

- Section §355.8001, Reimbursement for Vision Care Services;
- Section §355.8021, Reimbursement Methodology for Home Health Services;

- Section §355.8023, Reimbursement Methodology for Durable Medical Equipment, Prosthetics, Orthotics, and Supplies;
- Section §355.8085, Reimbursement Methodology for Physicians and Other Practitioners;
- Section §355.8089, Reimbursement Methodology for In-home Respiratory Therapy Services for Ventilator-Dependent Persons;
- Section §355.8141, Reimbursement Methodology for Hearing Aid Services;
- Section §355.8221, Reimbursement Methodology for a Certified Registered Nurse Anesthetist (CRNA) or an Anesthesiologist Assistant;
- Section §355.8441, Reimbursement Methodologies for Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) Services, also known as Texas Health Steps (THSteps) and the THSteps Comprehensive Care Program (CCP); and
- Section §355.8610, Reimbursement Methodology for Clinical Laboratory Services.

Proposed Rate Adjustments

A summary of the methodologies used to determine the proposed fee-for-service Medicaid rates is listed below:

- Procedure codes and descriptions used in the Texas Medicaid Program are national standard code sets as required by federal laws; Healthcare Common Procedural Coding System (HCPCS) and Current Procedural Terminology (CPT).
- Resource-based fee (RBF) methodology uses relative value units (RVUs) established by Medicare times a conversion factor. Current conversion factors include \$28.0672 for most services provided to children 20 years of age and younger and \$26.7305 for services provided to adults 21 years of age and older. Fees for services provided to children and identified as having access-to-care issues may be assigned a higher conversion factor, currently \$30.00.
- For items or services covered under a Medicare fee schedule, a percentage of the Medicare fee is used in accordance with applicable sections of the Texas Administrative Code and Texas State Plan.

- Access-based fees (ABFs) allow the state to reimburse for procedure codes not covered by Medicare or for which the Medicare fee is inadequate, or account for particularly difficult procedures, or encourage provider participation to ensure access to care.
- ABFs may also be established based on the Medicare fee for a service that is not priced using RVUs. Physician-administered drug pricing methodologies are outlined in §355.8085.
- For services and items that are not covered by Medicare or for which the Medicare rate is insufficient, different approaches are used to develop fees based on available information. These alternate methods include, as applicable:
 - The median or mean of the Medicaid fees from 14 states (the 10 most populous and the 4 bordering Texas) or the median or mean of the states that cover the service
 - Regional Medicare pricing from Novitas or a percentage of the Medicare fee
 - The current Medicaid fee for a similar service (comparable code)
 - 82 percent of the manufacturer suggested retail price (MSRP) supplied by provider associations or manufacturers
 - 89.5 percent of the average wholesale price for enteral and parenteral products
 - Cost shown on a manufacturer's invoice submitted by the provider to HHSC
